Password Validation System

B.Tech Python Programming – Activity-Based Learning

Python source code only. Save or copy the program into a .py file and run it with Python 3.

```
password = input("Enter a sample password to check: ")

checks = {
    "At least 8 characters": len(password) >= 8,
    "Contains an uppercase letter": any(ch.isupper() for ch in password),
    "Contains a lowercase letter": any(ch.islower() for ch in password),
    "Contains a digit": any(ch.isdigit() for ch in password),
    "Contains a special character": any(not ch.isalnum() for ch in password)
}

print("\n----- PASSWORD CHECK -----")
for rule, passed in checks.items():
    print(f"{rule}: {'Passed' if passed else 'Failed'}")

if all(checks.values()):
    print("Final status: Valid password format")
else:
    print("Final status: Password does not meet the policy")
```
